

ISO 26262^{USA}

2nd Edition, Autonomous Driving & Cybersecurity

PART OF
CTI
AUTOMOTIVE
WEEK
USA

ARE YOU
READY FOR
THE 2ND
EDITION
ISO 26262?

+++++ Early Bird discount: Register before February 28, 2018 +++++ Exclusive OEM discount +++++

CTI AUTOMOTIVE WEEK USA

1 WEEK
6 CONFERENCES
1,000+
INTERNATIONAL
AUTOMOTIVE
EXPERTS

CTI proudly presents the premiere of
CTI Automotive Week USA –
from 14 to 17 May 2018 in Novi, MI

For the first time, CTI offers you the chance to meet experts from multidisciplinary specialist departments in the automotive sector. Powertrain, connectivity, electrification, automation and safety ... we bring today's most important topics together.

The conferences	14 May	15 May	MAIN DAYS 16 May 17 May	
 CTI Symposium USA Automotive Transmissions, HEV and EV Drives	Introductory Days		Conference	
 AUTONOMOUS DRIVING SUMMIT USA			Conference	
 AUTOMOTIVE DIAGNOSTICS USA			Conference	
 ISO 26262 USA		Conference		Seminar
 AGILE AUTOMOTIVE USA		Conference		
 AUTOMOTIVE GLAZING USA*	Conference			
Supporting Program			Exhibition/Test Drive	
Supporting Program		Pre-check-in & Get Together	Networking Night	

YOUR BENEFITS ON 16 & 17 MAY 2018

- + Switch between conferences
- + Exhibition with 80+ companies
- + CTI Networking Night: meet your peers and make new contacts

MAIN DAYS SPECIAL

Purchase a Main Days Ticket for just 2,350 \$** and you're free to enjoy all events and activities on both main days (16 and 17 May 2018) of the AUTOMOTIVE WEEK. To book additional events on 14 and 15 May, please visit:

www.cti-automotiveweek.com

* Venue: Rochester (MI). ** Early-Bird: valid until 14 April 2018

7th International Annual CTI Conference ISO 26262

2nd edition ISO 26262
be part of the
expert community

**Moving towards
autonomous driving**
exchange your experiences

Safety meets Security
interactive workshop day

► CHAIRMAN

**Prof. Dr Dr h.c.
Manfred Broy**
Technical University of
Munich, Germany

► ADVISORY BOARD

Dr Barbara J. Czerny
ZF TRW, USA

Dave Hartfelder
General Motors
Company, USA

Joseph D. Miller
TRW Automotive,
USA

Kyle Post
Ford Motor
Company, USA

Padma Sundaram
General Motors
Company, USA

Dr David Ward
MIRA Limited,
UK

Artagun Yesildere
Robert Bosch LLC,
USA

► CTI Automotive Week Test Drive, 16 and 17 May 2018

During 16 and 17 May you will have the opportunity to experience the latest transmission and drive technology in series and demonstrator cars. Project engineers will be introducing the special characteristics and advantages of the technologies shown and answer your personal questions. Participants have to register at the check-in desk and must present a valid driving license on site. Since driving slots are limited, we cannot guarantee participation for all CTI Automotive Week attendees. Information about available vehicles will be updated online.

Tuesday 15 May, 2018

8.00

Registration and welcome coffee

8.30

Welcome address by the chairman

Prof. Dr Dr h.c. Manfred Broy,
Chair Software & Systems Engineering, Department of
Informatics, Technical University of Munich, Germany

9.00

KEYNOTE

Analyzing cyber-security and safety in automated systems

Dr John Thomas,
Executive Director, Partnership for Systems Approaches to
Safety and Security Department of Aeronautics and
Astronautics, Massachusetts Institute of Technology

9.30

Q&A and discussion

LEGAL ASPECTS

9.40

Product Liability Litigation: US/EU legal issues

Jeffrey Greene,
Lawyer, Shareholder,
Greenberg Traurig, LLP, USA

Daniel Wuhrmann,
Attorney-at-Law (Germany),
reuschlaw Legal Consultants, Germany

10.10

Q&A and discussion

PRACTICE WITH ISO 26262

10.20

Status Update for ISO 26262 2nd edition

Joseph D. Miller,
Chief Engineer Systems Safety,
TRW Automotive, USA

10.50

Q&A and discussion

11.00

Coffee break and visit of ISO 26262 exhibition

11.30

SOTIF ISO/PAS 21448 – Safety of the intended Functionality

- What is SOTIF and how does it relate to ISO 26262?
- The current status of SOTIF: A report from the ISO working group
- Examples of how and where SOTIF should be applied
- SOTIF and high level automation: The current gaps and challenges

Alexander Mirmilstein,
Functional Safety Coordinator, IEE S.A., Delegate for
Luxembourg in ISO TC22/SC32/WG8, Luxembourg

12.00

Integrating SOTIF into the Systems Engineering Pipeline

- Leveraging STPA
- Model Based Systems Engineering
- Virtual Validation methods

Kyle Post,
Vehicle Systems Safety Supervisor,
Ford Motor Company, USA

12.30

ASIL allocation (ASIL X & QM) vs. ASIL decomposition (ASIL X & QM(X)): Is there a difference?

- Example: A function and its monitoring
- Safety requirements: Derivation, allocation and their ASIL
 - The ASIL allocation approach
 - The ASIL decomposition approach
 - Resulting differences

Carsten Gebauer,
Senior Expert, Bosch Center of Competence "Functional
Safety", Robert Bosch GmbH, Germany

1.00

Lunch and visit of ISO 26262 exhibition

2.00

KEYNOTE

Dr Cem Hatipoglu,
Director, Office of Vehicle Crash Avoidance and
Electronic Controls Research, National Highway
Traffic Safety Administration (NHTSA), USA

2.30

Evolving a guideline for functional safety assessment

- Functional Safety Assessment – state of the art practices
- Inconsistencies in Assessment process, ratings
- Learnings and Best Practices from Assessment Guidelines used with other standards
- Recommended Guidelines for Functional Safety assessments and ratings
- Benefits and Importance of standard set of Guidelines for Assessment

Unnikrishnan Parameswaran Pillai,
Functional Safety Competency Manager,
Tata Elxsi Ltd., India

Parvathy Santha,
Associate Manager,
Tata Elxsi Ltd., India

AUTOMATED DRIVING

3.00

An Approach for Safety of the Intended Function in Advanced Automated Driving Systems

- Advanced automated vehicle systems need to handle SOTIF concerns both qualitatively and quantitatively
- Systematic approach for ODD, OEDR, safety analysis, MRC, safety validation and risk assessment
- Minimal risk assessment

Shawn Cook,
Systems Safety Engineer,
General Motors, USA

Krzysztof Pennar,
Systems Safety Engineer,
General Motors, USA

3.30

Safety assessment of health management system

- Autonomous Health Management System
- Safety Assessment of Health Management System
- Simulation and verification of Autonomous Health Management System

Esther Fuhua Zhou,
System Safety Engineer, Vehicle Health Management
and Minimal Risk, General Motors, USA

4.00

Coffee break and visit of ISO 26262 exhibition

*"Good diversity of topics
and discussion on current
challenges faced by OEMs,
Tier 1s and vendors related
to ISO 26262"*

*Amanda Gilley,
Denso International
America, Inc.*

4.30

Safety concept for detecting latent systematic faults in a universally verifiable autonomous vehicle architecture

- Review of a general Safety Goal and SOTIF for Level 5 autonomy
- Review of a verifiable and non-verifiable Functional Safety Concept
- Presentation of a safety concept for an example Level 5 functional architecture
- Partitioning of safety concept into proprietary components with open interfaces, allowing independent verification of safety and possible 3rd-party risk acceptance

Michael Woon,
Senior Functional Safety Consultant,
KVA, USA

5.00

Safety integrated power and driver solutions for systems with automated driving Level-3 requirements

- System configuration differences between automated driving Level-2 and Level-3
- System functional and safety requirements for automotive active safety systems targeting Level-3 automated driving
- What is the impact of the level-3 system requirements on integrated power supply safety architecture and functions
- What is the impact of the level-3 system requirements on pre-drivers & power stages safety architecture and functions
- Fail Safe vs. Fail Silent vs. Fail Tolerant requirements and impact on integrated safety power and pre-drivers/power stages solutions

Samir Camdzic,
Systems Engineer, Safety Power Architect,
Texas Instruments, Germany

5.30

Safety Power Management role in current fail operational system and its evolution in the challenges of L4/L5 autonomous driving

- The role of a Power Management device developed as a Safety Element out of Context (SEooC)
- How to build higher availability power supply to respond to random hardware failures
- Discussion around the limitations of the current fail-silent power supply generations in response to autonomous drive challenges

Jean-Philippe Meunier,
Functional Safety Architect,
NXP Semiconductors, France

6.00

**CTI cordially invites you to a
reception with drinks and finger food.
We look forward to welcoming you at
the Fireside Lounge.**

Wednesday 16 May, 2018

7.30 Registration and opening of the CTI AUTOMOTIVE WEEK exhibition

OPENING OF THE MAIN DAYS OF THE CTI AUTOMOTIVE WEEK

8.20

Welcome address by CTI and the chairmen

CTI Symposium USA

Dr Hamid Vahabzadeh,
Vice President and Product Line Manager, Global Transmissions,
AVL List GmbH, USA

ISO 26262 USA

Prof. Dr Dr h.c. Manfred Broy,
Chair Software & Systems Engineering, Department of Informatics,
Technical University of Munich, Germany

AUTONOMOUS DRIVING SUMMIT USA

Priv. Doz. Dr-Ing. Roman Henze,
Chief Engineer, Manager Vehicle Dynamics & Active Systems,
Institute of Automotive Engineering, Technical University of
Braunschweig, Germany

AUTOMOTIVE DIAGNOSTICS USA

Prof. Dr Norbert Schreier,
Head of Automotive Engineering/Service (FASE), Esslingen
University of Applied Sciences and Coordinator Automotive
Engineering/Service at CDHAW, Tongji University,
Shanghai, Germany

8.40

PLENARY SPEECHES

What is a powertrain and what is it good for?

Dan Nicholson,
Vice President, Global Propulsion Systems,
General Motors, USA

An update on global electrification and LG Chem's battery development and manufacturing

Denise Gray,
President and Chief Executive Officer,
LG Chem Power Inc., USA

The role of the drivetrain in future mobility

Prof. Dr Uwe Dieter Grebe,
Executive Vice President Global Business Development,
Sales & International Operations, AVL List GmbH, Austria

Vehicle electrification – opportunities and challenges

Dr V. Anand Sankaran,
Director, Electrified Powertrain Engineering,
Ford Motor Company, USA

Trending towards future mobility

Jeremy Carlson,
Principal Analyst, Automotive Technology,
IHS Markit, USA

10.20 Discussion with the morning speakers (Q&A)

10.40

Coffee break and visit to the
CTI AUTOMOTIVE WEEK exhibition

ISO 26262 USA

11.30

Short summary of the first day by the chairman

Prof. Dr h.c. Manfred Broy

SAFETY AND SECURITY

12.00

Safety and security – the perspective from security standards

- How is the link between safety and security addressed in automotive security standards (SAE J3061, ISO/SAE 21434)?
- Coordination of management activities
- Interactions between threat analysis and hazard analysis
- Interactions between safety concepts and security concepts

Dr David Ward,
Head of Functional Safety,
HORIBA MIRA Ltd., UK

MEDIA PARTNER

IN COMPLIANCE

12.30

Applying Static Code Analysis to Verify Safety and Security Properties

- Examples of safety-relevant vs. security-relevant programming defects
- Similarities and differences of safety and security requirements at the programming level
- Applying sound static analysis to demonstrate safety and security properties
- Achieving data safety: identifying the impact of potentially corrupted input data

Dr Daniel Kästner,
CTO,
AbsInt GmbH, Germany

1.00

Lunch break and visit to the
CTI AUTOMOTIVE WEEK exhibition

2.00

Attack Tree analysis

- An Introduction to Attack Tree Construction and Analysis
- Qualitative and Quantitative Threat Analysis
- A Simple Attack Tree Based on Real World Research

Dr David Wiseman,
Technical Consultant,
Isograph Ltd., UK

SEMICONDUCTORS AND THE 2nd EDITION ISO 26262

2.30

Evaluation of semiconductors as legacy parts and how ISO/FDIS 26262-8:2018 can help

- Clear separation between systematic faults and random hardware faults as who's responsibility it is to show suitability
- Semiconductors have to ensure that the risk of a safety requirement due to a systematic fault is sufficiently low
- Evidence for suitability of random fault management (which is proven usually by FMEDA) is allocated to the integrator to the next higher level of design integration
- Is this the rationale that the necessity to perform an FMEDA on IC level is not given any more?

Dipl.-Phys. Mathias Kamp,
Director, Functional Safety Management,
Elmos Semiconductor AG

Karol Niewiadomski,
Product Manager Cyber Security, Functional Safety
Expert, SGS-TÜV Saar GmbH, Germany

SOFTWARE, TOOLS AND METHODS

3.00

Software safety analysis methods

- Software safety analysis
- Systematic faults
- Safety verification method
- Safety critical paths

- Criticality level
- ISO 26262 2nd edition -Software methods

Dr Rani Mukherjee,
Functional Safety Lead, Vehicle Safety Division,
Robert Bosch Engineering, India

3.30

Coffee break and visit to the
CTI AUTOMOTIVE WEEK exhibition

4.00

On the impact of ISO 26262: 2018 on model-based development of safety-related systems

- Analysis of the second edition of ISO 26262
- Necessary adaptations to existing software development processes
- Focus on model-based software development of safety related systems
- Questions for a gap analysis
- Main differences regarding requirements and methods for model-based development

Dr Heiko Doerr,
Managing Director,
Model Engineering Solutions, Germany

4.30

A Low-Cost Software ISO 26262 compliant Environment

- The transition to ISO 26262 can be costly in terms of labor and tools.
- A sample environment will be shown which minimizes tool costs.
- Low-cost software environments can enhance automation to focus an organization on safety

Frank Chang,
Software Architect,
LHP Engineering Solutions, USA

5.00

An ISO 26262 compliant test approach for models and production code

- ISO 26262:6 recommends a combination of test methods on model and code level
- Combining these methods into one platform increases efficiency and avoids redundant tasks
- Important aspects include: Tool integration, Automation and Qualification

Markus Gros,
BTC Embedded Systems AG, Germany

6.00

Start of transfer to the evening event of the CTI AUTOMOTIVE WEEK

CTI Networking Night

The CTI Networking Night is an opportunity to mingle with all participants, speakers, exhibitors and sponsors. Make new business contacts in a relaxed atmosphere, discuss the topics of the day with your colleagues and peers while enjoying delicious food and drinks.

Thursday 17 May, 2018

Workshop: SAFETY MEETS SECURITY

8.30

Opening of the check-in and of the CTI AUTOMOTIVE WEEK exhibition

9.00

Short summary of the second conference day by the chairman

Prof. Dr Dr h.c. Manfred Broy

Workshop:

Dr Barbara J. Czerny,
Senior Technical Specialist Safety and Cybersecurity,
ZF TRW, USA

Dr David Ward,
Head of Functional Safety,
MIRA Limited, UK

9.30

Workshop session 1 – Guidelines and standards for automotive cybersecurity

In this session we will introduce current and emerging automotive practices for cybersecurity:

- The automotive security landscape
- Why are specific security standards needed for automotive?
- Introduction and overview of SAE J3061 "Cybersecurity Guidebook for Cyber-Physical Vehicle Systems"
- Developments towards international standard ISO/SAE 21434

11.00

Coffee break and visit to the CTI AUTOMOTIVE WEEK exhibition

11.40

Workshop session 2 – Management of safety and security

Security management has many potential parallels with functional safety management – in this session we will consider:

- Advantages and disadvantages of combining the security lifecycle with functional safety management
- Interface points and communication paths between the two disciplines
- Emerging practices for coordinating safety and security
- Specific organizational requirements for security management
- Relationship with wider IT security management
- How to support security of products in service, in particular ensuring a timely and appropriate response to field concerns

1.10

Lunch break and visit to the CTI AUTOMOTIVE WEEK exhibition

2.30

Workshop session 3 – Threat analysis and risk assessment

Threat analysis and risk assessment (T&R/TARA) has many parallels with existing H&R/HARA processes for functional safety – in this session we will consider:

- Methods for threat identification
- Schemes for risk classification of threats
- Aligning T&R with H&R for potential safety-related outcomes of threats
- Relationship to assurance or integrity levels

4.30

End of the CTI Conference
ISO 26262 USA

"Highly recommend"

Fred Sejalon,
Robert Bosch LLC

THE FOLLOWING EXHIBITORS ARE ALREADY PARTICIPATING:

AbsInt provides tools for validation, verification and certification of safety-critical software. Key products are aiT WCET analyzer for obtaining timing guarantees, StackAnalyzer for proving the absence of stack overflows, RuleChecker for checking coding guidelines, Astrée for proving the absence of runtime errors and data races, TimingProfiler for computing WCET estimates in early stages, and the formally verified optimizing compiler CompCert. NEW: TimeWeaver combines static path analysis with real-time instruction-level tracing to provide WCET estimates.

AbsInt Angewandte Informatik GmbH

Science Park 1 | 66123 Saarbrücken | www.AbsInt.com

If you've ever seen a rocket launch, flown on an airplane, driven a car, used a computer, touched a mobile device, crossed a bridge, or put on wearable technology, chances are you've used a product where ANSYS software played a critical role in its creation. **ANSYS** is the global leader in engineering simulation. We help the world's most innovative companies deliver radically better products to their customers. By offering the best and broadest portfolio of engineering simulation software, we help them solve the most complex design challenges and engineer products limited only by imagination.

ANSYS, Inc.

2600 ANSYS Drive | Canonsburg, PA 15317 | <https://www.ansys.com>

BTC Embedded Systems is a tool provider for intelligent and automated test solutions for models and production code. Within a certified and highly integrated test environment, we address all test methods recommended by ISO 26262 for software unit test and software integration test. BTC Embedded Systems was founded in 1999 and today maintains a global presence with more than 100 employees.

BTC Embedded Systems AG

Gerhard-Stalling-Str. 19 | 26135 Oldenburg, Germany | www.btc-es.de

Isograph was founded in 1986 and is one of the world's leading companies in the development and provision of integrated Reliability, Availability, Maintainability and Safety software products. Isograph software is used widely in the Automotive industry. Isograph Reliability Workbench FaultTree+ and FMECA modules have been tested and certified by SGS-TÜV as suitable for safety analyses according to ISO 26262.

Isograph Inc

375 South Main Street | Suite 4 | Alpine, UT 84004 | www.isograph.com

LHP provides Engineering Solutions and Technology Integration for embedded electronic systems, communications and data analytics to the Transportation Industry. LHP's broad knowledge can assist customers in every step of the V-development model through Application Lifecycle Management. LHP works to provide state of art testing technologies, model based design concepts, standardized embedded software architecture and complete work flow solutions for functional safety.

LHP Engineering Solutions

www.lhpes.com/contact-us

Lucomm Technologies develops innovative semantic technology platforms which combine sensing diversity, semantic intelligence and automation. Our semantic diversity platform and product suite is applicable in a variety of markets including infrastructure, transportation, safety, cybersecurity, healthcare, building management, retail, logistics, manufacturing and others. Real time semantic technologies foster smart infrastructure, autonomous systems and cybersecurity.

Lucomm Technologies Inc.

www.lucommtech.com

Model Engineering Solutions (MES) is the competence center for model-based software. Structured along three main areas, MES Quality Tools, MES Engineering Services, and MES Academy, MES offers ideal support for integrated quality assurance. Tools: MES Model Examiner® (MXAM) is the first-choice solution for checking modeling guidelines. MES Test Manager® perfectly implements requirements-based unit testing in model-based development.

Model Engineering Solutions

Lake Orion (MI, USA) / Berlin (Germany) | www.model-engineers.com

QA Systems tools automate unit testing, code coverage, integration testing and static analysis to optimise safety critical embedded software and accelerate standards compliance. Their leading unit and integration test tool, Cantata, is independently certified for software development according to ISO 26262, up to the highest automotive safety integrity level (ASIL-D).

QA Systems North America Inc.

118 Sutton Road, Needham | MA 02492, USA | www.qa-systems.com

Lanyard Sponsor

SGS-TÜV Saar Global Competence Center for Functional Safety and Cyber Security as an accredited body for Functional Safety (e.g. ISO 26262) and Cyber Security (e.g. SAE J3061, IEC 62443) is your preferred partner with its range of worldwide services: Training and Personal Qualification, Consultancy and Support, Safety Analytics Assessments, Audits and Certification of Products and Processes. Our global team of long experienced experts is one of the largest worldwide. We are active in key standardization committees for Functional Safety (e.g. ISO/TC 22/SC 3/WG 16 with regard to ISO 26262) and Cyber Security (ISO/TC 22/SC 32/WG 11 for upcoming ISO/SAE 21434).

SGS-TÜV Saar GmbH

Hofmannstraße 50 | 81379 München | www.sgs-tuev-saar.com/en/functional-safety.html

Sponsor Notepads & Pens

kVA is a technical and management consulting group, focused on functional safety. At kVA we provide process support, training services, and engineering software to clients in the automotive and industrial industries. We get the job done for our clients, on time and under budget, for programs where safety is non-negotiable.
